The diagram illustrates a network topology. On the left, there are two hosts: **B9** and **B10**. Host **B9** is connected to a switch labeled **C1**, which is then connected to a central switch labeled **C3**. Host **B10** is connected to a switch labeled **C2**, which is also connected to the central switch **C3**. The central switch **C3** is connected to a destination on the right, represented by a vertical line. The connections from **B9** and **B10** to **C3** represent two different paths for traffic.
